DETAILED ACTION

1. This Office action is in response to Applicant's amendment filed November 2, 2004. Applicant has amended claims 59, 61, 62, and 64--71. New claims 72-76 have been added. Currently, claims 59-76 remain pending in the application.

- 2. The text of those sections of Title 35 U.S. Code not included in this action can be found in the prior Office action, Paper No. 20040429.
- 3. The objection of claims 67-68 and 70-71 is withdrawn in view of applicant's amendments and remarks.
- 4. The rejection of claims 61 and 62-71 under 35 U.S.C. 112, second paragraph, is withdrawn in view of applicant's amendments and remarks.
- 5. The rejection of claims 59-71 under 35 U.S.C. 102(b) as being anticipated by Onan et al, U.S. Patent No. 5,968,879, is maintained for the reasons of record.

NEW GROUNDS OF REJECTION

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 10/039,591 Page 3

Art Unit: 1751

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 72-76 are rejected under 35 U.S.C. 102(b) as being anticipated by Onan et al, U.S. Patent No. 5,968,879.

Onan et al, U.S. Patent No. 5,968,879, discloses a polymeric composition comprising water, a water-soluble monomer, an initiator, and an oxygen scavenger (see col. 2, lines 25-42). It is further taught by Onan et al that the water includes fresh water, seawater, brine, or water containing various salts (see col. 3, lines 25-30), and that the composition may also contain i) an oxygen scavenger, such as hydrochloric acid (see col. 4, lines 40-49), ii) a gelling agent, such as cellulose derivatives and guar gum (see col. 4, lines 50-65), iii) a foaming agent, such as an ammonium alcohol ether sulfate (see col. 5, lines 25-50), iv) a foam stabilizing agent, such as methoxypolyethylene glycol (see col. 6, lines 29-67), and a gas, such as nitrogen (see col. 5, lines 15-24 and col. 9, lines 19-20). Specifically, note Example Nos. 8-10 in Table II, which were made by adding hydroxyethylcellulose, a sulfated linear alcohol ethoxylate, methoxypolyethylene glycol, silica, hydrochloric acid, and hydroxyethylacrylate to a solution of synthetic seawater, per the requirements of instant claims 72-76. Therefore, instant claims 72-76 are anticipated by Onan et al, U.S. Patent No. 5,968,879.

Response to Arguments

8. Applicant's arguments filed November 2, 2004 have been fully considered but they are not persuasive.

Applicant argues that Onan et al, U.S. Patent No. 5,968,879, does not teach or suggest in general a composition that contains a water miscible solvent. However, the examiner asserts that Onan et al does indeed teach this limitation. Specifically, Examples 8-10 in Table II of Onan et al contain methoxypolyethylene glycol (i.e. as the foam stabilizer), which is a well known hygroscopic liquid that is miscible with water.

It is further argued by applicant that Onan et al does not teach that the composition is used to contact contaminants, such as brine. However, the examiner respectfully disagrees. Specifically, Onan et al clearly teach that the composition is used in contact with brine (see col. 3, lines 25-30 of Onan et al), which clearly meets applicant's requirements of "contacting brine". Furthermore, the examiner asserts that the brine does not have to be present as a contaminant, since the process step only requires the contacting of brine with the composition. Also, it is noted by the examiner that applicant's claims 60 and 63 recite that the composition "may be contacted with brine", which is an optional step that is not required.

Applicant further argues that Onan et al do not teach or suggest in general the limitations found in dependent claims 61 and 64-76. However, the examiner asserts that dependent claims 61 and 64-76 are clearly meet by Onan et al, since applicant's claims, as presently written, indicate that the contaminants may comprise up to 50% by weight of the composition, which include compositions that include 0% by weight of the

Application/Control Number: 10/039,591 Page 5

Art Unit: 1751

contaminants. Thus, since these contaminants are optional, the examiner asserts that the instant claims are still anticipated by Onan et al.

Conclusion

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
